

Webpage Documentation

Overview

This document provides a detailed description of the functionality and usage of the webpage designed for creating and publishing posts. The webpage allows users to write posts, upload various media files, and publish them.

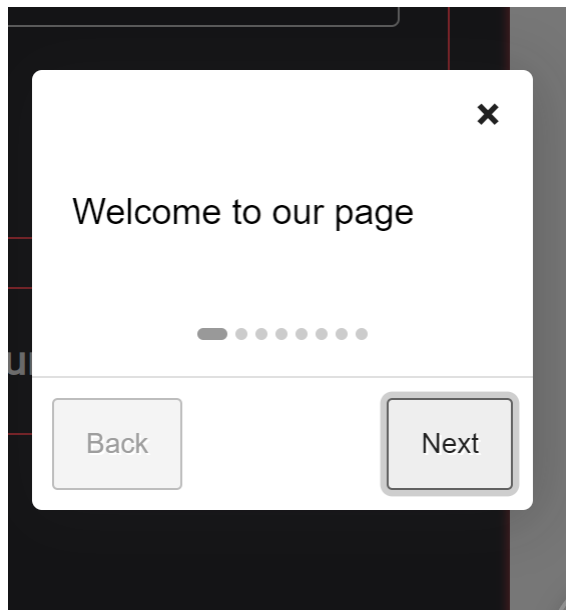

Introduction

The webpage allows users to create and publish posts with the following functionalities:

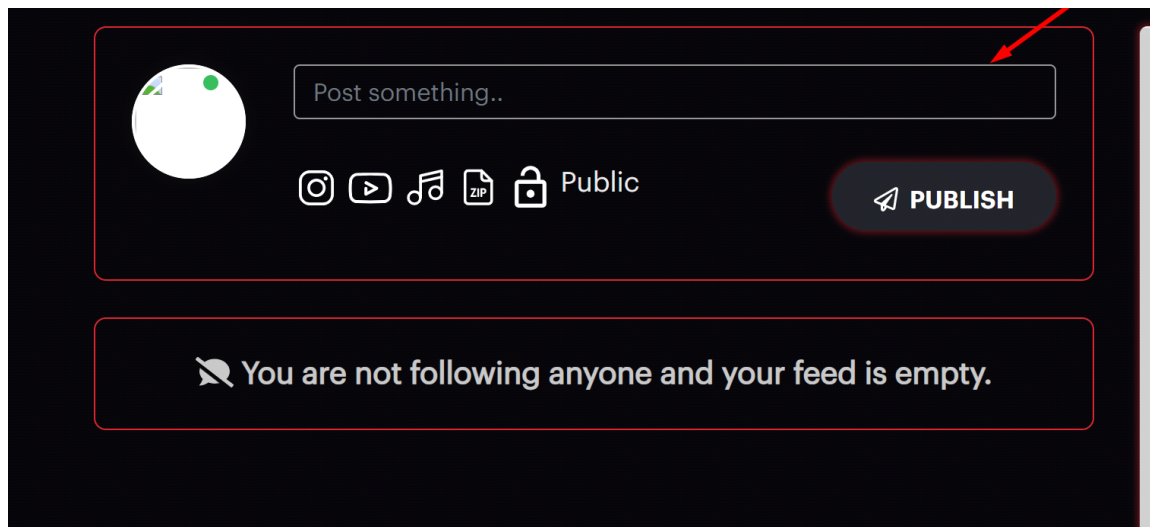

1. Write a post
 2. Upload images
 3. Upload videos
 3. Upload zip files
 4. Upload MP3 files
- Publish the post

Features

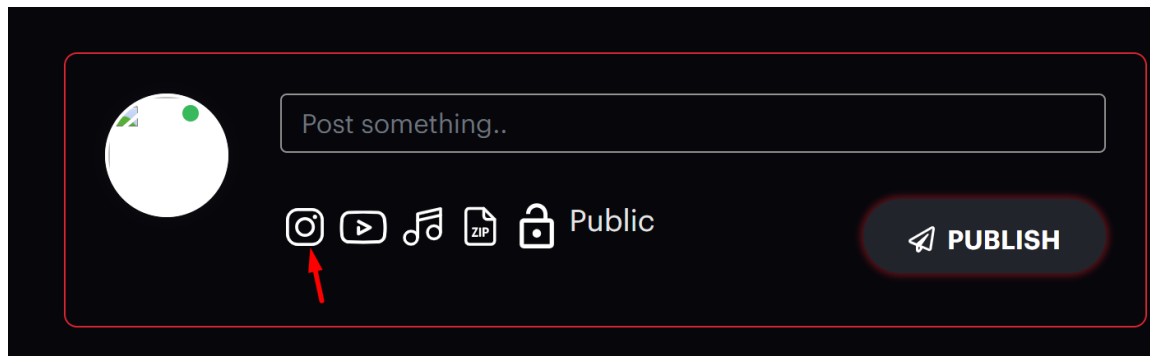

Page Tour: The Page Tour feature provides users with a guided walkthrough of the webpage's functionalities. It aims to help new users understand how to use the various features available on the page, including writing and publishing posts, uploading media, and more.

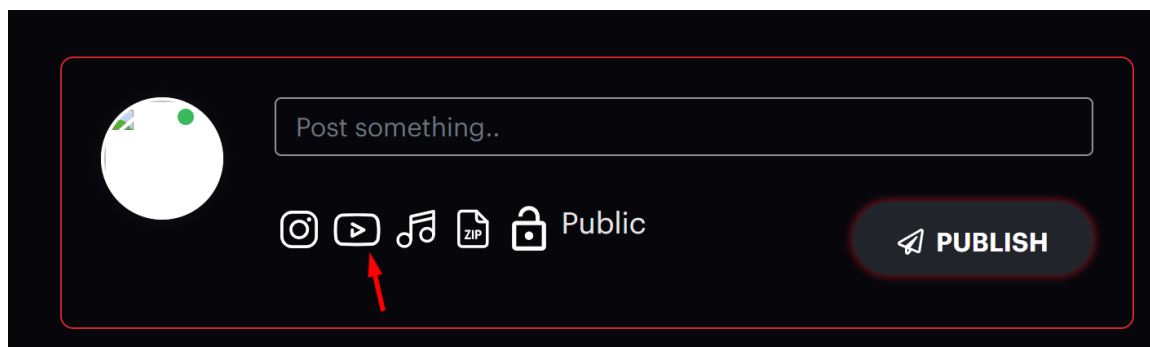

Write Post: Users can enter text content for their post.

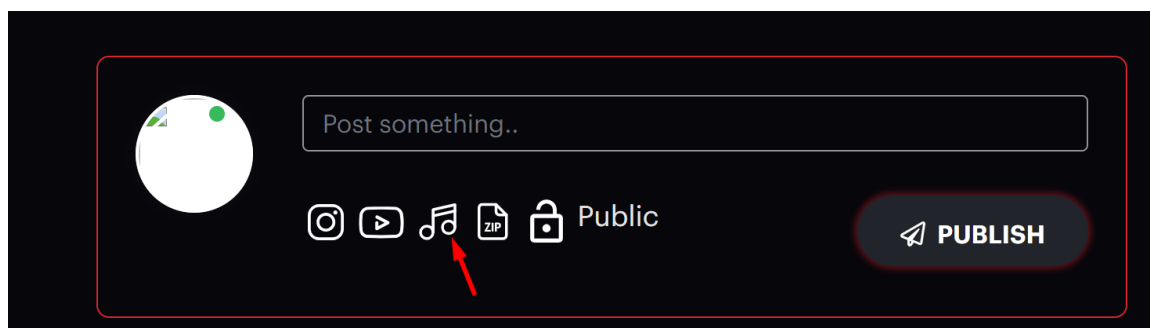

Upload Picture: Users can upload image files (JPEG, PNG, etc.).

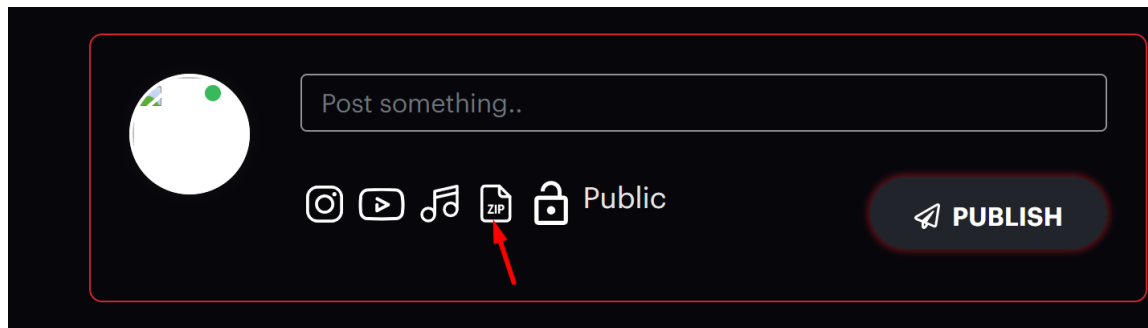

Upload Video: Users can upload video files (MP4, AVI, etc.).

Upload MP3: Users can upload audio files in MP3 format.

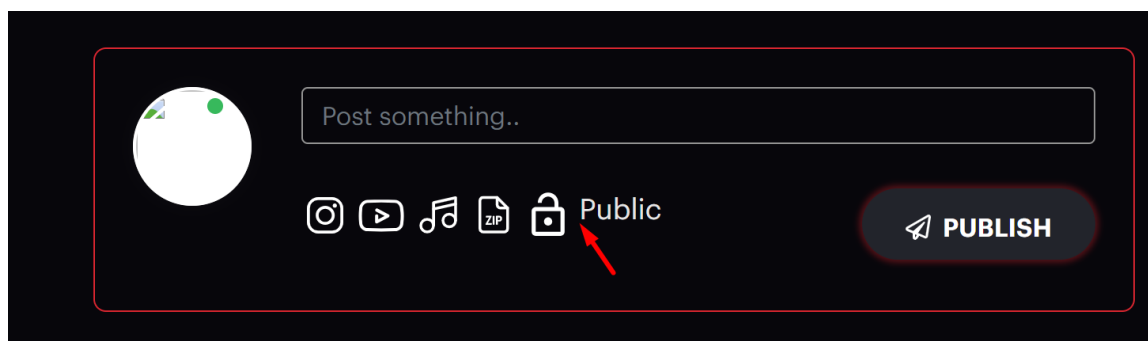

Upload Zip: Users can upload zip files containing multiple files.

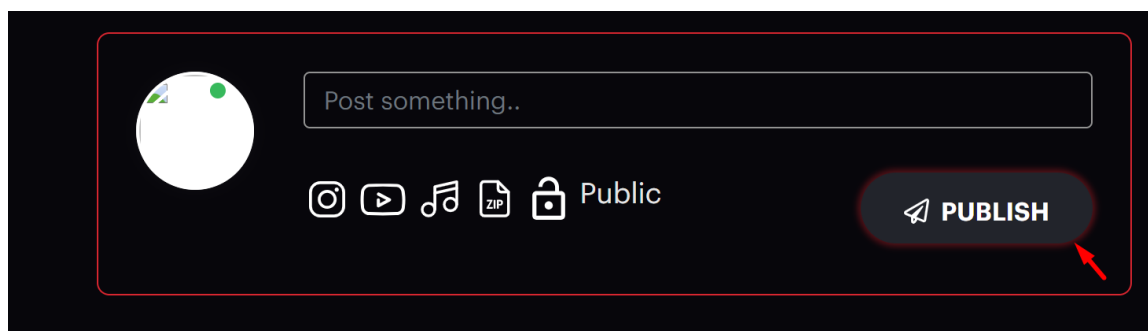

The "**Lock**" button is designed to offer additional options or details about the post. Its visibility is conditional based on the user's type:

Public Users: The button is visible and provides options for public engagement.

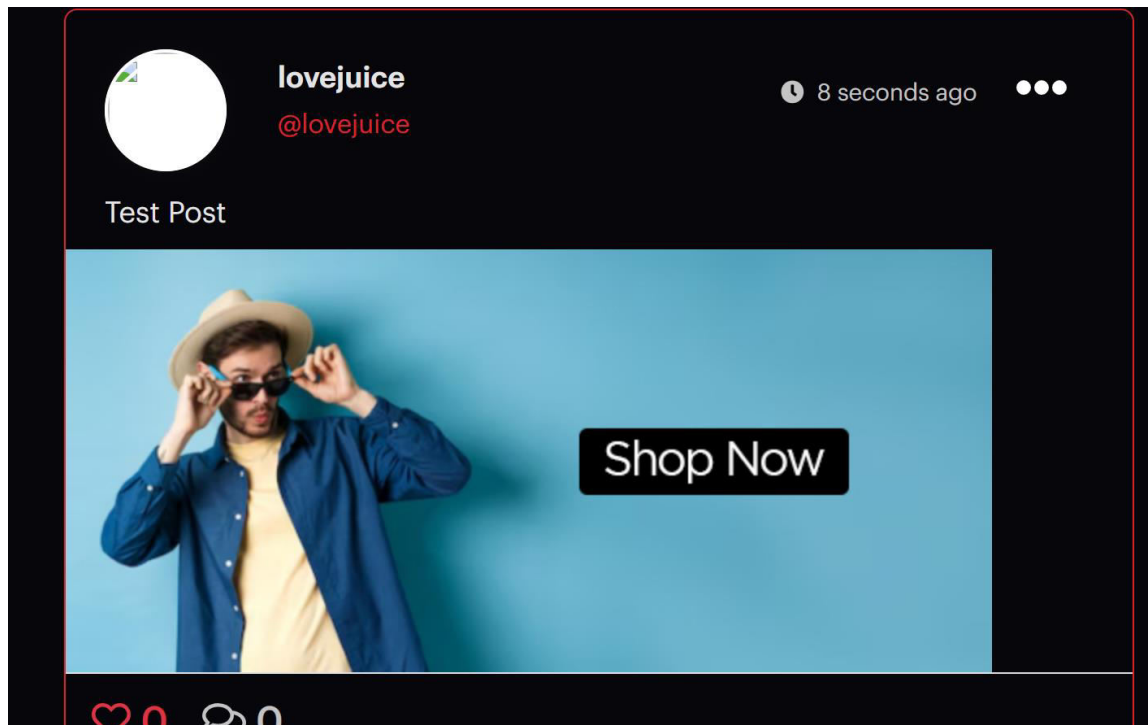

Followers: The button is visible and provides additional engagement options.

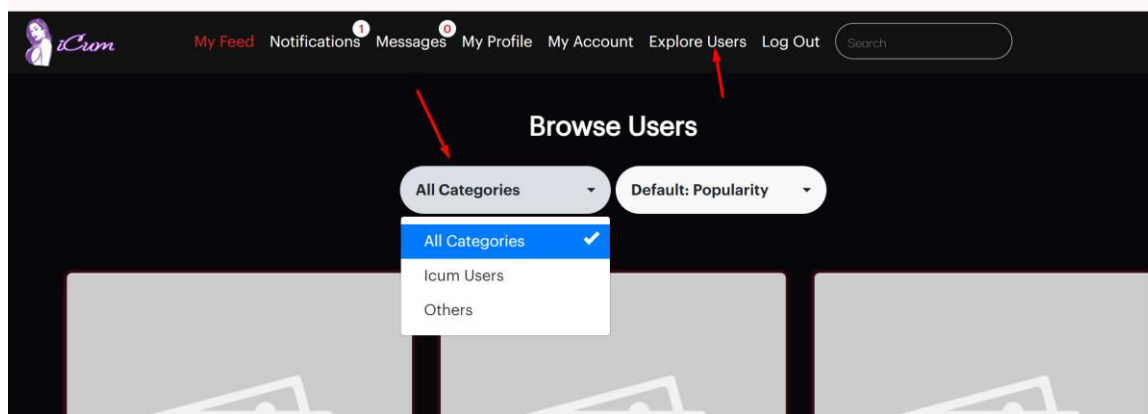

Publish Button: Users can click this button to publish the post and its associated media.

Published Post: Once a post is published, it becomes visible to other users according to its privacy settings. This section details how the published post is displayed, its features, and how users can interact with it.

Explore Users: The "Explore Users" functionality allows users to discover and explore other users based on various categories and sorting options. This feature helps users find and connect with others based on specific criteria, such as categories, popularity, and other metrics.

User Profile: The User Profile functionality allows users to view detailed information about themselves or other users. This feature provides a comprehensive view of a user's personal details, activity, and interactions on the platform.
